

## OneSCM® Procurement Collaboration

Collaborate Smarter. Execute Faster.

### Agility

POs, change orders and approvals are managed in real time through a single collaboration console for greater ability to track and change quantities and timelines as demand or conditions change.

### Highlights

- Reduce Procurement Costs
- Strengthen Supplier Relationships
- Automate review and approval cycles

### Benefiting From Strategic Supplier Relationships

As companies forge more strategic relationships with their suppliers, many are looking to revamp the way they collaborate with their partner network. But many businesses lack the capabilities to manage the entire process in an integrated way and extend capabilities and information out to their supply base. Instead, they rely on partial solutions, manual processes or workarounds that don't allow key internal personnel and suppliers real-time visibility into purchasing transactions.

### Why OneSCM® Procurement Collaboration

OneSCM Procurement Collaboration from TAKE Supply Chain improves the efficiency and profitability of supplier relationships by allowing companies to automate, monitor and control each step of the procurement process. It creates a more collaborative environment by extending purchasing information, including global tax support, and capabilities to all trading partners in the supply base. Suppliers log into a shared management console to review, acknowledge and monitor orders in real-time. Configurable business rules and a proprietary workflow engine expedite and simplify the review and approval of POs, acknowledgments and change orders. Companies can manage all materials procurement from a single console and reduce the likelihood of unauthorized and non-compliant order fulfillment.

### Integration, Flexibility, Accountability

OneSCM's Procurement Collaboration simplifies the implementation process and works with enterprise applications already in place. Unlike other solutions, it offers companies the flexibility to adapt workflows and business rules as business needs or regulatory requirements evolve. OneSCM simplifies the onboarding of existing suppliers and the addition of new suppliers to the network. The resulting visibility of supplier activity allows closer tracking of performance along key measures to eliminate bottlenecks and unnecessary expense. Suppliers and buyers are able to proactively resolve discrepancies and performance issues, replacing the traditional semi-annual and annual AVL reviews with a continuous improvement cycle.

*Improves the efficiency and profitability of supplier relationships by allowing companies to automate, monitor and control each step of the procurement process.*

---

### Increased Visibility and Automation

Consolidates and automates procurement activities into a single management console for increased visibility of spending across the enterprise and throughout the supply chain. A custom rules engine and configurable workflow route items automatically for review and approval.

### Flexible Integration

Provides advanced capabilities while adapting to the systems and processes already in place. Can be deployed as SaaS, on-premise or a combination, based on data requirements, and offers integration with suppliers across the globe regardless of technological capabilities.
